

HOW TO LOAD  
RESCUE AT RIGEL  
DUAL FORMAT DISK

The enclosed disk contains two versions of RESCUE AT RIGEL, the TRS-80 on one side, the Apple on the other. This instruction sheet explains how to load the disk. For instructions on how to play the game, read the enclosed rule book.

READ ALL INSTRUCTIONS LISTED UNDER YOUR COMPUTER TYPE BEFORE LOADING!

TRS-80

The minimum configuration for this program is 32K with TRSDOS. To run this program on the Model III, you need to use the TRSDOS conversion utility found in the TRSDOS Manual. Model I, Level II users do not need to do anything extra.

1. Power up your machine with the RESCUE AT RIGEL disk in drive 0, (TRS-80 side up).
2. When DOS READY appears, type BASIC and hit the "Enter" key.
3. Answer 1 to the question number of files.
4. Answer 47778 to the memory size question.
5. Enter: RUN"RESCUE", and you are ready to begin play.\*

\*Note that there are three kinds of prisoners. The larger the representation, the more valuable the prisoner is.  
Also, Model III users must use 47000 as the memory size for this game.

APPLE

Minimum system configuration for this program is 48K RAM with APPLE-SOFT in ROM (or on a language card), and 1 disk drive.

In order to play from the enclosed 16 sector disk, simply boot the system. For second and successive playings, simply type RUN, you do not have to reboot.

You may find it necessary to power down before and/or after your playing session.

THE ENCLOSED DISK IS PROTECTED FROM COPYING. YOU WILL BE UNABLE TO MAKE EXECUTABLE COPIES!!
